

Elevate website system Semester Project Proposal

Elevate is nonprofit company founded by Brandon Hotz here in Kearney, and they recently moved to Lincoln. The aim of the company is to try to help people from around the world to start their own business. Which means that they have a lot of clints and partner around the world. Also, they have their own brand as they sell their product. They would like to build a system catalog to their costumes and clints, that make it easier for them to keep in eyes and also make it easier for their clints to ask for help. The application should include the following function:

- Country (Country Code, Country Name, City, state, zip)
- Clints (Clint ID, Clint last name, Clint first name, Clint country)
- Project (Project Code, Project name, Project start, Project end)
- Contract (Contract number, Contract agreement)
- Payment Information (Money need for project, Possible Money to get)
- Report
- Search database information
- They wish to track their data and make it available in their website. As they can shows their statistics and how many projects they have for each company, and also make it possible to the public. They also want to control by including roles for number of countries.
